

ROSBACK

PERFORATOR ACCESSORIES AND OPTIONS

TrueScore-Pro

The TrueScore System is designed for scoring any material, especially sensitive materials such as digitally printed stock. No more outsourcing difficult creasing jobs.

TrueScore-Pro Quad

The 2x2 TrueScore System is designed for hinge scoring digitally printed perfect bound book covers. Use for any application requiring one score, or two scores from 1/4" spacing or greater. The 2x2 TrueScore System works for all cover stock and a wide variety of other materials.

TrueLine Gap Feeding Kit

Use your Vacuum TrueLine to feed a 248 Cross Perforator, right angle folder, or other inline process. Provides programmable spacing between sheets.

Easy-Out Perforating Shafts

These shafts easily separate and quickly re-engage for quick and easy tool changes.

Cobra Strike Perf Heads

The Rosback Cobra 4x4 Strike Perforating System offers versatility that no other system can match. The Strike Heads are individually electronically controlled to give a multitude of strike patterns with surface speeds up to 24,000 ft/hr. This Strike System can run one to four lines of perf, slits or scores, each independently programmable for different strike patterns. Strike activities can be performed at the same time as regular perforating, slitting, scoring or micro perforating. Available for all 240 Series, 223SRX and 226SRX models. Available as individual heads for 223 and 226 Vacuum Truelines

Vacuum Retro-Fit Kit

Most friction Trueline Perforators can be retro fit with a Vacuum feed system. Eliminate marking and get consistent feeding with no rollers to wear out.

Ball Bearing Construction

Standard on 240 Series and 226, also available as an upgrade or retro fit for models 220 and 223 TrueLines.

Caster Kits

Roll your TrueLine Perforator to where it's needed or out of the way when not in use. Saves valuable floor space.

Pressure-Sensitive Slitting Attachment

Extremely accurate carbide blades for back slitting label stock and semi-slitting card stock.

"CD" Inlay Heads

Perforate and slit the edge of CD Inlay cards to ensure the precision and accuracy required when inserting inlays into jewel cases automatically or by hand

Quick-Align Perforating Heads

The Quick-Align Heads dramatically reduce setup-time and cutter replacement costs.

Get *A-Head* on your production! Get a Quick-Align head today for faster and easier perforator cutter setup.

Narrow Margin Perf Heads

For perforations close to the sheet edge (3/8" From Sheet Edge minimum)

Special 1/2" Perf Heads

For closely spaced perforations down to 1/2" between lines

Scoring\Creasing Heads

Many varieties in stock. Ask us if you have special needs.

Split Creasing Heads

Quickly and easily add, remove, or relocate creasing heads anywhere along the cutter shafts. The Split Creasing Heads will dramatically reduce setup time. Even inexperienced operators will enjoy quick setup and perfect results.

Standard Slitting Head

Sturdy, long lasting knives split sheets apart accurately and cleanly.

Gutter Slitter

Slit apart multiple format jobs while ejecting scrap strips from between the finished pieces.

Special Engineered Heads

Many jobs required combinations of perforation, slit, and score that standard tooling is unable to produce in one pass. Often, a specially engineered head can produce the desired results, eliminating changeover and reducing setup time. If you have a difficult job, chances are good we have done it before and can provide a solution that will save you time & money.

Micro-Perf Heads

Are designed to produce consistent miniature perforations into stock. A ream of micro perforated stock will remain flatter than slot-cut or knife-cut perforated stock. Choose from 36, 54, or 72 teeth to the inch.

Gutter Slit/Perf Heads

Combinations of perforation and slitting commonly used to produce multiple CD inlays from a single sheet. Slit apart multiple format jobs while ejecting the scrap strip away from the finished pieces.

Knife-Cut Perforating Heads

Pierce the sheet but do not remove material to produce a clean, nearly invisible line of perforation in 3 to 12 teeth to the inch.

Slot Cut Perforating Heads

Cut out a slot produce a clean, highly visible and attractive line of perforation in 3 to 12 teeth to the inch.
